SRM AI & Enterprise Centers of Excellence

AI & Enterprise Technologies | Industry-Certified Learning Pathways | Institutional Excellence

A strategic collaboration proposal between

SRM University and Technical Hub

TECHNICAL HUB®
Since 2016

SRM UNIVERSITY
(Under section 3 of UGC Act 1956)

Vision

Build an industry-connected technology ecosystem that grows certified talent, supports applied innovation, and creates lasting institutional capability.

October 2026

1. Executive Summary

Technical Hub proposes a strategic collaboration with SRM University to establish dedicated Centers of Excellence and industry-certified learning pathways spanning artificial intelligence, enterprise automation, cloud infrastructure, and low-code platforms. The initiative transitions technical learning beyond standalone workshops into structured, accredited, project-based pathways.

2. Objectives

- Establish premier Centers of Excellence across advanced AI, platform automation, and cloud technologies.
- Integrate globally recognized industry certification pathways with defined academic outcomes and university credits.
- Cultivate high-impact student projects, enterprise use cases, hackathons, and research publications.
- Enable faculty upskilling and sustainable internal delivery capabilities across leading tech stacks.

3. Claude Centre of Excellence

TECHNICAL HUB® Since 2016

Claude
Certified Services Partner

The proposed Claude Centre of Excellence functions as the university's dedicated hub for Anthropic Claude foundational models, application development, autonomous AI agents, and enterprise AI solutions.

- Claude AI, prompt engineering, structured reasoning, and foundational model mastery
- Hands-on application development with Anthropic Claude platform, Claude Sonnet/Opus, and REST APIs
- Autonomous AI agents, tool use, and Model Context Protocol (MCP) integrations
- Enterprise AI use cases, domain-specific retrieval, and real-world deployment patterns
- Student and faculty AI research, innovation challenges, and ecosystem showcases

Claude CoE Outcome
A dedicated campus innovation hub enabling continuous Claude AI learning, application engineering, autonomous agents, and enterprise problem-solving.

4. OpenAI Centre of Excellence

TECHNICAL HUB® Since 2016

OpenAI Select Partner

The OpenAI Centre of Excellence will serve as SRM University's premier facility for OpenAI tools, ChatGPT integration, API engineering, intelligent agents, and applied artificial intelligence.

- OpenAI foundational models, ChatGPT advanced data analysis, and prompt design
- OpenAI API engineering: GPT-4o, function calling, JSON schema outputs, and vision integration
- Assistants API, Code Interpreter, file search, and custom agent toolsets
- Vector embeddings, semantic search, and Retrieval-Augmented Generation (RAG) architectures
- Applied AI capstone projects, industry hackathons, and OpenAI Select partner engagements

OpenAI CoE Outcome
An AI development center where students and faculty build production-ready applied AI solutions with OpenAI technologies.

5. AI Ready Engineer

The AI Ready Engineer initiative is a specialized certification pathway preparing students for modern software engineering workflows through intensive Claude and GitHub Copilot enablement.

- AI-assisted coding, contextual code generation, and intelligent autocomplete with GitHub Copilot
- Deep architectural analysis, multi-file code review, and automated testing via Claude AI
- Prompt engineering patterns for software development, debugging, and legacy code migration
- Integration of AI coding assistants across industry-standard IDEs (VS Code, JetBrains)
- Curriculum and mock assessments aligned with industry-standard AI Engineer certifications

GitHub Copilot Certification Program

FOUNDATIONS
Claude Certified Architect

179
GitHub certification

AI Ready Engineer Outcome

Industry-ready software developers with certified mastery in AI pair programming, augmented productivity, and end-to-end AI-assisted engineering.

6. ServiceNow Training & Placement Support

Technical Hub provides ServiceNow training on the enterprise Now Platform, preparing students for cloud workflow administration, ITSM solutions, and certification examinations. The team also provides placement assistance to help students prepare for relevant career opportunities.

- ServiceNow architecture, lists, forms, data dictionary, tables, and schema relationships
- User administration, security rules, role-based access control (RBAC), and permissions
- Process automation with Flow Designer, Business Rules, Client Scripts, and ITSM solutions
- Preparation for **ServiceNow Certified System Administrator (CSA)** and **Application Developer (CAD)** certifications
- Placement assistance, including interview preparation and career guidance for ServiceNow roles

359
ServiceNow certification

ServiceNow Training & Placement Outcome

Students build practical ServiceNow administration and application development skills, with support for certification preparation and placement readiness.

7. Pega University Program

Through the Pega University Program, Technical Hub prepares students for enterprise low-code digital process automation, customer engagement architecture, and certified application development.

- Pega Infinity architecture, case lifecycle management, data modeling, and user portal design
- Business rules configuration, decision tables, decision trees, and routing strategies
- Integration services: REST/SOAP connectors, background processing, and Tracer debugging
- Targeted preparation for **Pega Certified System Architect (CSA)** and **Senior System Architect (CSSA)** pathways

462
Pega certification

Pega Program Outcome
High-demand low-code enterprise architects with certified capabilities in orchestrating complex business processes on the Pega platform.

8. Red Hat Academy

As an authorized Red Hat Academy partner, Technical Hub equips students with industry-standard Linux system administration, virtualization, container basics, and enterprise server infrastructure skills.

- Red Hat Enterprise Linux (RHEL) system administration, shell scripting, file management, and package deployment
- User accounts, security permissions, access control lists (ACLs), and systemd service management
- Storage management: Logical Volume Manager (LVM), partitions, networking, and firewall administration
- Targeted preparation for the gold-standard **Red Hat Certified System Administrator (RHCSA â€“ EX200)** credential

Red Hat Certified System Administrator

544
Red Hat certification

Red Hat Academy Outcome
Certified Linux infrastructure administrators proficient in enterprise server deployment, cloud-native administration, and RHCSA readiness.

9. MongoDB University

The MongoDB University initiative provides students with rigorous NoSQL document database design, query optimization, high-throughput aggregation, and modern application persistence skills.

- NoSQL document modeling, JSON/BSON paradigms, flexible schema design, and relational comparisons
- CRUD operations, complex querying, projection, update operators, and performance tuning
- Advanced MongoDB Aggregation Pipeline: multi-stage grouping, transformations, and analytics
- Application driver integration (Node.js/Python/Java) and preparation for **MongoDB Associate Developer** certification

188
MongoDB certification

MongoDB University Outcome
Certified NoSQL database developers equipped to design, build, and optimize high-performance data layers for modern distributed applications.

10. Automation Anywhere

Technical Hub establishes an intelligent automation pathway cultivating skills in Robotic Process Automation (RPA), cognitive automation, and GenAI-integrated bot development on Automation 360.

- Automation 360 architecture, Control Room, Bot Creator, Bot Runner, and process recording
- Automated data extraction, web automation, Excel integration, API orchestration, and error handling
- Document automation utilizing IQ Bot with machine learning and intelligent document processing (IDP)
- AI-powered intelligent bots integrating generative AI models with automated operational tasks
- Comprehensive preparation for **Automation Anywhere Certified Advanced RPA Professional** credential

247
Automation Anywhere certifications

Automation Anywhere Outcome

Accredited intelligent automation specialists capable of architecting and deploying end-to-end software robots across enterprise business operations.

11. Cisco Networking Academy

Through Cisco Networking Academy, Technical Hub provides industry-standard training in computer networking, enterprise infrastructure routing/switching, cybersecurity defense, and network automation.

- Network architecture, IPv4/IPv6 addressing, subnetting, VLANs, switching, and dynamic routing (OSPF)
- Enterprise network security: access control lists (ACLs), VPNs, threat mitigation, and firewall policies
- Cybersecurity fundamentals: threat analysis, endpoint security, and SOC operations
- Network programmability, Python automation, RESTful APIs, and software-defined networking (SDN)
- Preparation for **Cisco Certified Network Associate (CCNA)**, **CISCO CyberOps Associate**, and Cisco Certified Support Technician Networking and Cybersecurity certifications

123
Cisco certification

Cisco Academy Outcome
Globally certified network engineers and cybersecurity analysts equipped with practical infrastructure configuration, defense, and automation expertise.

12. Oracle Academy

Technical Hub partners with Oracle Academy to provide students with hands-on Java programming, object-oriented software engineering, relational database design, and SQL mastery.

- Java programming fundamentals: object-oriented concepts, algorithms, collections, and exception handling
- Relational database modeling, entity relationship (ER) design, normalization, and relational schema mapping
- Structured Query Language (SQL) data definition, manipulation, indexing, and complex queries
- Database programming with PL/SQL: stored procedures, functions, packages, and database triggers
- Curriculum and practice aligned with the **Java Foundations Certified Associate** credential

912
Oracle certification

Oracle Academy Outcome

Certified developers with strong object-oriented programming foundations, relational database design skills, and Oracle certification readiness.

13. Splunk Partnership

Through the Splunk Partnership, Technical Hub enables students to master big data analytics, log intelligence, cybersecurity monitoring, and enterprise observability.

- Machine data fundamentals, log ingestion, forwarders, indexers, and search head architecture
- Splunk Search Processing Language (SPL): search commands, reporting, statistical aggregations, and subsearches
- Real-time dashboard creation, alert configuration, visual data modeling, and operational monitoring
- Security Information and Event Management (SIEM) workflows, threat correlation, and SOC analysis
- Preparation aligned with industry observability standards and the **Splunk Core Certified User** pathway

Splunk Partnership Outcome

Data and observability specialists proficient in analyzing and visualizing machine data to drive enterprise security and operational intelligence.

14. Mile2 Partnership

As an authorized Mile2 Training Center, Technical Hub delivers globally accredited cybersecurity education, ethical hacking, digital forensics, and defensive cyber operations.

- Cybersecurity architecture: threat vectors, attack surfaces, security policies, and defense-in-depth strategies
- Ethical hacking & penetration testing: reconnaissance, scanning, vulnerability assessments, and web app auditing
- Digital forensics, incident response workflows, network packet analysis, and security auditing frameworks
- Alignment with globally recognized credentials: **Certified Professional Ethical Hacker (C)PEH** and **Certified Incident Handling Engineer (C)IHE**

22	43
CompTIA Security+	Mile2 certification

Mile2 Partnership Outcome

Accredited cybersecurity professionals skilled in penetration testing, vulnerability assessment, cyber incident response, and defensive system hardening.

15. AWS Academy

Through AWS Academy, Technical Hub prepares students for cloud computing careers, scalable cloud architecture design, serverless computing, and enterprise cloud infrastructure deployment.

- Cloud architecture, AWS global infrastructure, core services (EC2, S3, RDS, VPC), and security compliance
- Scalable system design, high availability, load balancing, auto-scaling, and fault-tolerant cloud networks
- Serverless computing with AWS Lambda, API Gateway, managed databases, and CloudWatch operational monitoring
- Targeted preparation for **AWS Certified Cloud Practitioner (CLF-C02)** and **AWS Certified Solutions Architect â€“ Associate (SAA-C03)**

1,473
AWS certification

AWS Academy Outcome
Certified cloud architects and engineers equipped to design, deploy, and manage secure applications across AWS.

16. Snowflake Data Platform

The Snowflake pathway develops practical skills for working with Snowflakeâ€™s cloud data platform, from account navigation and data loading to compute management and governed data access.

- Navigate Snowflake accounts, databases, schemas, stages, and warehouses
- Load and work with structured and semi-structured data using SQL
- Manage virtual warehouses and select compute resources for workloads
- Apply roles, access controls, and data governance practices
- Preparation aligned with the **SnowPro Associate: Platform** credential

134
SnowPro certification

Snowflake Program Outcome

Students gain foundational data platform skills in Snowflake, including data loading, compute management, SQL, and access governance.

17. Microsoft Certification Programs

The Microsoft certification pathway builds cloud and digital workplace skills through Azure, Microsoft Technology Associate (MTA), and Power Platform programs.

- Azure fundamentals: cloud concepts, core services, security, and governance
- Azure development: application services, identity, compute, storage, and monitoring
- MTA foundations across IT infrastructure, software development, databases, and networking
- Power Platform: low-code apps, workflow automation, solution architecture, and Power BI analytics
- Digital credentials include **Azure Fundamentals**, **Azure Developer Associate**, **MTA**, **PL-600**, and **PL-300**

4,651 Microsoft certificates

Microsoft / Azure: 2,332 • MTA: 2,319

PL-600 is shown as a legacy cohort badge; Microsoft retired the exam on June 30, 2026.

Microsoft Certification Program Outcome

Students develop cloud foundations, Azure application skills, and broad IT capabilities validated through Microsoft certifications.

HUB HOPPERS

18. Salesforce Certification Pathway

Technical Hub provides structured Salesforce training and placement assistance, combining guided study with hands-on practice in customer relationship management and the Salesforce platform.

- CRM foundations, customer data, standard objects, and sales and service workflows
- Administration skills covering users, permissions, security, reports, and dashboards
- Low-code app building with Flow, validation rules, and Lightning tools, with an introduction to platform development and integrations
- Role-based preparation across administrator, app builder, developer, consultant, and architect pathways

CERTIFIED Platform Developer

CERTIFIED Platform Administrator

136
Salesforce certification

Salesforce Program Outcome
Learners build practical skills to manage Salesforce environments, create business applications, and support customer-facing CRM workflows.

TRAINING & PLACEMENT PATHWAY

1
CRM Foundations
Understand customer data, objects, and sales and service processes.

2
Guided Platform Labs
Practice administration, Flow automation, and app building.

3
Career Readiness
Prepare for certification and receive placement assistance.

19. Juniper Certification Pathway

Technical Hub provides focused Juniper networking training and placement assistance through practical configuration, troubleshooting, and certification preparation.

- Junos OS fundamentals, IP networking, and routing and switching configuration
- Enterprise and service-provider network operations, fault isolation, and troubleshooting
- Network security, cloud and data-center connectivity, and automation concepts
- Certification preparation structured across Associate, Specialist, Professional, and Expert levels

110
Juniper certification

Juniper Program Outcome

Learners strengthen their ability to configure, operate, and troubleshoot Juniper-based networks across enterprise and service-provider environments.

TRAINING & PLACEMENT PATHWAY

1
Network Foundations
Build core IP, routing, and switching knowledge.

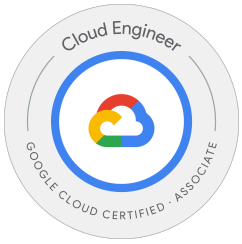
2
Junos Practice
Configure devices and troubleshoot network scenarios.

3
Career Readiness
Prepare for certification and receive placement assistance.

20. Google Cloud Certification Pathway

Technical Hub provides Google Cloud training and placement assistance that helps learners develop practical cloud skills through guided study and applied deployment exercises.

- Cloud foundations, resource organization, identity and access management, and networking
- Deploying and operating workloads with compute, storage, containers, and monitoring services
- Cloud architecture, data and analytics, application development, and security concepts
- Role-based preparation spanning foundational, associate, and professional certification pathways



106
Google Cloud certification

Google Cloud Program Outcome
Learners gain practical experience planning, deploying, and supporting cloud workloads, with skills aligned to common cloud roles.

TRAINING & PLACEMENT PATHWAY

1
Cloud Foundations
Learn IAM, networking, and core cloud services.

2
Applied Cloud Labs
Deploy, monitor, and secure sample workloads.

3
Career Readiness
Prepare for certification and receive placement assistance.

21. AutoCAD Certification Pathway

Technical Hub provides AutoCAD training and placement assistance focused on accurate technical drawings, drafting workflows, and preparation for industry-recognized certification.

- Drawing setup, coordinate systems, units, layers, and object properties
- Creating and editing geometry, reusable blocks, and referenced drawing content
- Annotation, dimensions, layouts, plotting, and drawing output standards
- Applied drafting exercises, drawing review, and certification-focused practice

67
AutoCAD certification

AutoCAD Program Outcome

Learners produce clear, well-structured technical drawings and develop the drafting skills needed for design and documentation roles.

TRAINING & PLACEMENT PATHWAY

1
Drafting Foundations
Work with coordinates, layers, and drawing geometry.

2
Design Projects
Apply annotation, layouts, and output standards.

3
Career Readiness
Prepare for certification and receive placement assistance.

22. Cadence VLSI Design Training

Technical Hub provides VLSI training using Cadence electronic design automation (EDA) workflows, introducing students to semiconductor design, verification, and implementation.

- VLSI fundamentals, RTL concepts, design constraints, and semiconductor design stages
- RTL synthesis with Cadence Genus and digital implementation with Innovus
- Design verification, timing analysis, physical checks, and signoff concepts
- Hands-on labs, project practice, and review using industry design workflows
- Career preparation and placement assistance for VLSI design, verification, and implementation roles

cadence PERSPEC Verification – PERSPEC SYSTEM VERIFIER - BASIC CERTIFIED v19.09

57
Students completed Cadence certifications

Cadence VLSI Training Outcome

Students build practical knowledge of semiconductor design workflows, from RTL synthesis and implementation through verification and signoff.

TRAINING & PLACEMENT PATHWAY

1
VLSI Foundations
Study RTL concepts, design constraints, and chip design stages.

2
EDA Workflow Labs
Practice synthesis, implementation, and verification workflows.

3
Career Readiness
Review project work and receive placement assistance.
